

Opening Up a VPN for Remote Access to the Server

This guide provides step-by-step instructions on how to open up a VPN for remote access to a server. It includes detailed instructions on accessing the server, setting up a VPN server, and creating a new user. Following this guide will enable someone to securely access their server remotely.

1 Open "1Password"

2

Search for Ubiquiti Login: Shop Camera, Router, Network and

3 Open up the program OpenVPN Connect

4 Open up a browser and type "unifi.ui.com Enter"

5 Copy the login information from 1Password

6 Click "Paste" into the Email or Username

7 Click "Copy" on the password in 1Password

8 Click "Paste" into the browser

9 Click "Sign In"

A screenshot of a login interface. At the top, there is a label "Email or Username" above a text input field containing "it@uigteam.com". Below this is a label "Password" above a password input field with masked characters and a toggle icon. A link "Forgot password?" is positioned below the password field. A blue "Sign In" button is centered below the link, with an orange circle highlighting it. At the bottom, a link "Don't have an account? Create one." is displayed.

10 Do not save the login information. So "x" out of the prompt from Google if this pops up.

The screenshot shows a user creation dialog box overlaid on a network management interface. The dialog box has a white background and a thin gray border. It contains the following elements:

- Username:** A text input field with the value "rachel".
- Password:** A password input field with a single character and a toggle icon on the right.
- Link:** A blue link with a magnifying glass icon that says "Go to RADIUS section for more advanced settings".
- Buttons:** Two buttons at the bottom: a gray "Cancel" button with an orange circle highlight, and a blue "Create User" button.

The background interface is dimmed and shows various network configuration options like "Host Address", "Netmask", and "Usable Hosts".
